

External Alarm Light & Horn For Gas Detectors

An external alarm light with combination audible horn is an electronic device designed to alert operators and other personnel both visually and audibly to a specific danger.

Most commonly an external alarm light and horn is used with a gas leak detector to warn of gas leaks before entering a structure or room.

Features

- Single compact unit
- Wall mounting
- LED strobe light with red lens
- 95 dB Audible horn
- Weather resistant

Available Models

- GA-AL-110 (110VAC)
- GA-AL-220 (220VAC)

The external alarm light & horn is an optional accessory for use with all Hydro Instruments gas leak detection equipment. The alarm light connects to a relay inside the gas detector monitor. This can be a sensor specific relay or a common relay.
